

## C11 - 4.4 - Solve by Quadratic Formula HW

*Solve for x – intercepts using quadratic formula*

$$y = x^2 - 6x + 5$$

$$y = x^2 - 10x + 24$$

$$y = x^2 - 10x + 16$$

$$y = x^2 + 4x - 5$$

$$y = x^2 - 8x + 15$$

$$y = 2x^2 + 6x - 9$$

$$y = -3x^2 + 12x + 8$$

$$y = 2x^2 - 8x + 13$$
