

# C11 - 6.7 - Sum of Reciprocals Consecutive Integers Notes

The sum of the reciprocals of two consecutive integers is  $\frac{5}{6}$ . What are the integers?

Let "x" = 1st #  
Let x + 1 = 2nd #

$$\frac{1}{x} + \frac{1}{(x+1)} = \frac{5}{6}$$

Restrictions

$$x \neq 0 \quad x \neq -1$$

$$\frac{1}{x} + \frac{1}{(x+1)} = \frac{5}{6}$$
$$\left(\frac{1}{x} + \frac{1}{(x+1)} = \frac{5}{6}\right) \times LCD$$

LCD:  $6x(x+1)$

$$6(x+1) + 6x = 5x(x+1)$$

$$6x + 6 + 6x = 5x^2 + 5x$$

$$0 = 5x^2 - 7x - 6$$

$$0 = (5x^2 - 10x) + (3x - 6)$$

$$0 = 5x(x - 2) + 3(x - 2)$$

$$0 = (5x + 3)(x - 2)$$

$$x = 2$$

1st number = 2

2nd number = 3

$$\cancel{x = -\frac{3}{5}} \quad x = 2$$
