

C12 - 2.1 - d vs t, v vs t Notes

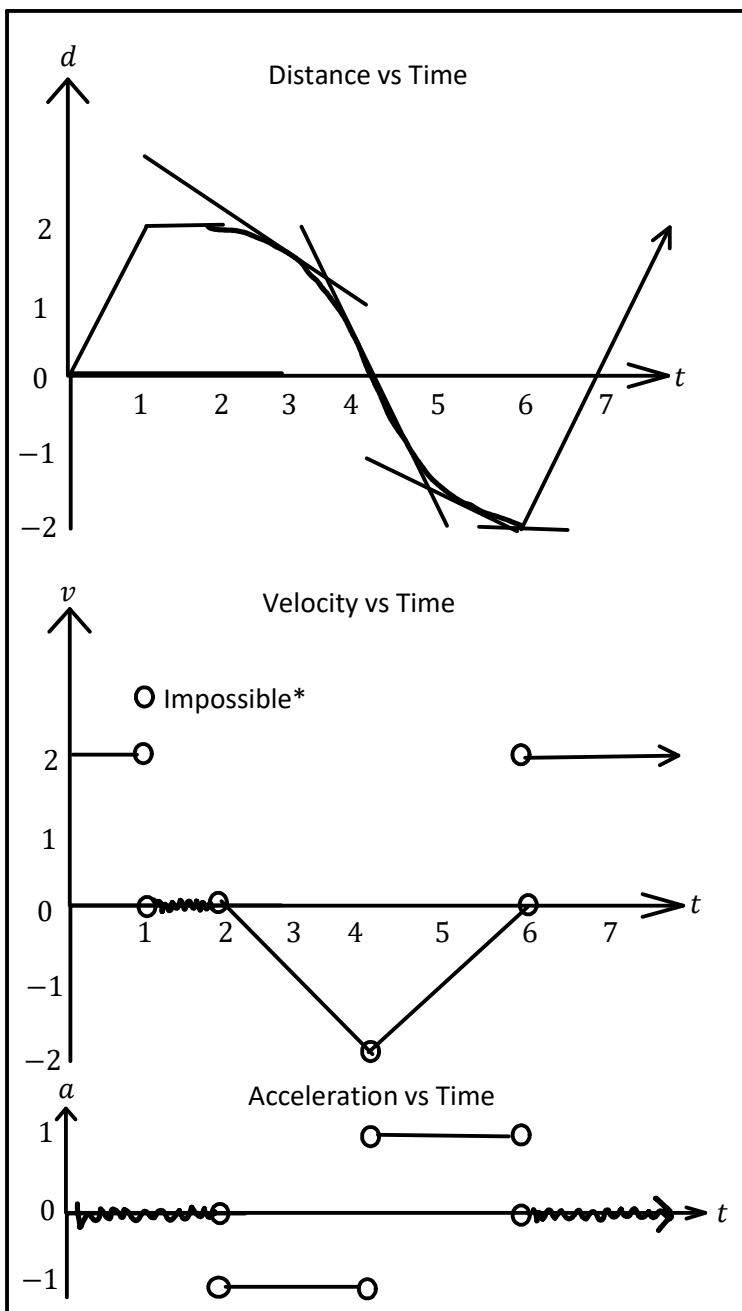

Physics 11/12 Constant Acceleration

Slope → Value

Draw Tangents

Velocity is Slope of Distance vs Time

0-1 Slope is 2, draw a line at two
0-2 Slope is 0, draw a line at zero
2-4 Slope is 0 then about -2, draw a slope of -2
4-6 Slope is -2 then about 0, draw a slope of +2
6-8 Slope is 2, draw a line at two.

Probably won't see curved velocity until Calculus

Acceleration is Slope of Velocity vs Time

0-2 Slope is 0, draw a line at zero
2-4 Slope is -1, draw a line at -1
4-6 Slope is +1, draw a line at +1
6-8 Slope is 0, draw a line at 2

C12 - 2.1 - Anti/Derivatives Notes

Draw the Derivative/Antiderivative.

y' value \rightarrow y value

$y' = 0$ where $y = \text{max/min}$

Pick an x-value to talk about, we are not done talking about that x-value until we're done talking about that x-value.

y value \rightarrow m value (y')

$y = \text{max/min}$ where $y' = 0$
