## C12-5.0-Electrochemistry

Electrochemistry - The conversion of chemical energy to electric energy and back.
Electrochemical Cell - A system which produces electrical energy or causes a chemical reaction.

Reduction-Oxidization Reaction (Redox Reaction)

$$
2 A g_{(a q)}^{+}+C u_{(s)} \rightarrow 2 A g_{(S)}+C u_{(a q)}^{+} \quad \begin{aligned}

| Reduction Reaction-Species gain electrons. |
| $2 A g_{(a q)}^{+}+2 e^{-} \rightarrow 2 A g_{(S)}$ |
| Oxidation Reaction-Species lose electrons. |
| $C u_{(s)} \rightarrow C u_{(a q)}^{+}+2 e^{-}$ |

Ag is the Oxidizing Agent $\quad \mathrm{Cu}$ is the Reducing Agent (Reduced)
(Oxidized)
Oxidization Number - Charge an atom would possess if the species containing the atom were made up of ions.
The sum of the positive charges and the negative charges must equal the overall charge on the species.

## C12-5.0-Redox Titrations Electrochemistry

Oxidizing Agents - $\mathrm{KMnO}_{4}$ is a very useful oxidizing agent. $\mathrm{K}^{+}$is a spectator.
25 mL solution with unknown $\left[\mathrm{Fe}^{2+}\right]$ is titrated to an endpoint with acidic $\mathrm{KMnO}_{4}$, requires 17.52 mL of acidified $0.1000 \mathrm{M}_{\mathrm{KMnO}}^{4}$. Find $\left[\mathrm{Fe}^{2+}\right]$.

$$
\mathrm{MnO}_{4}^{-}+8 \mathrm{H}^{+}+5 e^{-} \rightarrow \mathrm{Mn}^{2+}+4 \mathrm{H}_{2} \mathrm{O} ; E^{o}=1.51 \mathrm{~V}
$$

$$
\begin{aligned}

\end{aligned}
$$

moles $\mathrm{KMnO}_{4}^{-}=0.1000 \frac{\mathrm{mmol}}{\mathrm{mL}} \times 17.52 \mathrm{~L}=1.752 \mathrm{mmol}$
moles $\mathrm{Fe}^{+}=1.752 \mathrm{mmol} \mathrm{KMnO}_{4}^{-} \times \frac{5 \mathrm{mmolFe}^{2+}}{1 \mathrm{mmolMnO}_{4}^{-}}=8.760 \mathrm{mmol} \quad\left[\mathrm{Fe}^{2+}\right]=\frac{8.760 \mathrm{mmol}}{25 \mathrm{~mL}}=0.3504 \mathrm{M}$

Reducing Agents - NaI or KI are common reducing agents.
25 mL of bleach is reacted with excess KI . The $\mathrm{I}_{2}$ produced requires exactly $46.84 \mathrm{~mL} 0.7500 \mathrm{M} \mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3}$ to endpoint. Using Starch as an indicator find bleach [ $\mathrm{OCl}^{-}$].
$2 \mathrm{H}^{+}+\mathrm{OCl}^{-}+2 \mathrm{I}^{-} \rightarrow \mathrm{Cl}^{-}+\mathrm{H}_{2} \mathrm{O}+\mathrm{I}_{2} \quad \mathrm{I}^{-}$is involved in reducing Laundry Bleach NaOCl.

moles $\mathrm{OCl}^{-}=17.57 \mathrm{mmol}_{2} \times \frac{1 \mathrm{mmol} \mathrm{OCl}^{-}}{1 \mathrm{mmol} \mathrm{I}_{2}}=17.57 \mathrm{~mol} \quad\left[\mathrm{OCl}^{-}\right]=\frac{17.57 \mathrm{mmol}}{25 \mathrm{~mL}}=0.7026 \mathrm{M}$

## C12-5.0-Electrochemical Cell Electrochemistry

Electrode - A conductor at which a half-reaction occurs.

Anode - (Electrode)

- Which Oxidization occurs.
- Receiving Electrons from substance being Oxidized
- Toward which Anions travel

$$
\begin{aligned}
& A_{g} \rightleftharpoons \mathrm{Ag}^{+}+e^{-} \\
& \mathrm{Cu} \rightleftharpoons \mathrm{Cu}^{2+}+2 e^{-} \quad \text { Half-Reactions }
\end{aligned}
$$

Cu has a greater tendency to oxidize than Ag . Causing an excess of electrons on the Cu Anode. Electrons flow from Cu to Ag Electrode (via the wire.) Equilibrium is upset (Le Chatelier's Principle) \& $\mathrm{Ag}^{+}$ions are forced to reduce at the Ag Cathode to $A g_{(s)}$. Water \& certain ions ( $\mathrm{Cu}^{2+} \& \mathrm{NO}_{3}^{-}$in above) pass through the salt-bridge but total mixing is prevented. (Only ions flow in the solution)

$$
\begin{aligned}
& A_{g} \rightleftharpoons \mathrm{Ag}^{+}+e^{-} \\
& \mathrm{Ag}^{+}+e^{-} \rightarrow \mathrm{Ag}
\end{aligned}
$$

Voltage - Tendency for electrons the flow. $\frac{\text { Work }}{e^{-} \text {transferred }}$ (Electric Potential). Difference of Half-Cell Voltages*.

$$
2 H_{(a q)}^{+}+2 e^{-} \rightarrow H_{2(g)} \quad ; \quad E^{o}=0.000 \mathrm{~V}
$$

$E^{o}$ - Standard $-25^{\circ} C$
Reduction

- Gases are at 101.3 kPa ( 1 atm )

Potential (Volts, - Elements are in Standard
V ) in Standard States (Normal Phase)
State (o). $\quad-1 M$ concentration for all solutions in half-cell reactions

$H_{2(g)}$ passes over a platinum (Inert) metal electrode which accepts or supplies electrons to the half-cell as required.
